

Batch1Exercise # 7

Dated: 12/10/2017

Consider the program fragment given below:

```
Switch(i+j)
{
    case 1: x = y+z
    case 2: x = y*z
    default: x = y/z
}
```

Assume production rules to generate the above fragment and write the semantic actions to generate the three-address code using any higher level language
